

# QUARTER DOME MIRROR

## DESCRIPTION:

Quarter-dome mirrors attach to the inside corner of a wall at two-way or "L" intersections to provide a 90° viewing angle around blind corners. Dome mirrors are used for close viewing and have a lower magnification level than convex mirrors. Provides a 90 degree view for 2 way. An excellent choice for use in elevators to help with blind corner viewing, in retail stores to prevent theft, and industrial/office use for traffic safety.

**MODEL : TS 824 /TS 825**

MODEL NO	TS 824	TS 825
MIRROR MATERIAL	POLYCARBONATE	
SIZE	60 CM	80 CM
